## ALBERTA REGULATION 56/2006

### Safety Codes Act

#### PRESSURE EQUIPMENT EXEMPTION ORDER

##### *Table of Contents*

- 1 Definitions
- 2 Exemptions
- 3 Repeal
- 4 Expiry
- 5 Coming into force

##### **Definitions**

**1(1)** In this Regulation,

- (a) “fully vented” means open to atmosphere with no isolating device on the vent and with the vent sized and maintained so that the pressure in the pressure equipment does not exceed atmospheric pressure;
- (b) “heating surface” means any part of the pressure boundary of a boiler that is in contact with a fluid under pressure on one side and the source of heat on the other side as calculated on the surface having the greater radius if the surface is curved.

**(2)** The definitions in the *Safety Codes Act* and the *Pressure Equipment Safety Regulation* apply to this Order.

##### **Exemptions**

**2(1)** The *Safety Codes Act* and the *Pressure Equipment Safety Regulation* do not apply to the following:

- (a) a boiler or pressure vessel subject to the *Transportation of Dangerous Goods Act, 1992* (Canada) and the *Canada Shipping Act* (Canada);
- (b) pressure equipment that is owned by the Government of Canada;
- (c) air brake systems subject to the *Motor Vehicle Safety Regulations* under the *Motor Vehicle Safety Act* (Canada);

- (d) air brake systems for off-road vehicles;
- (e) a pipeline, as defined in the *Pipeline Act*, except for a boiler, pressure vessel, pressure plant, power plant or heating plant that forms the whole or any part of an installation, as defined in the *Pipeline Act*;
- (f) the following pressure equipment that forms the whole or part of a pipeline as defined in the *Pipeline Act*:
  - (i) dust pot;
  - (ii) gas drip;
  - (iii) pig receiver;
  - (iv) pig launcher;
  - (v) indirect fired-heater coils;
  - (vi) odorizer tanks.

**(2)** The *Pressure Equipment Safety Regulation* does not apply to the following:

- (a) a power boiler that forms the whole or part of a power plant and
  - (i) has a heating surface not exceeding one square metre, or
  - (ii) has an electric power rating not exceeding 10 kilowatts;
- (b) a boiler that forms the whole or part of a heating plant and
  - (i) has a heating surface not exceeding 2 square metres, or
  - (ii) has an electric power rating not exceeding 20 kilowatts;
- (c) a boiler that
  - (i) is used in connection with a hot water heating system,
  - (ii) is connected to an expansion tank that is fully vented to the atmosphere, and

- (iii) has no valves or other obstructions to prevent circulation between the boiler and the expansion tank;
- (d) a pressure vessel or pressure piping system that
  - (i) is fully vented or operating with one or more pressure relief devices with set pressure not exceeding 103 kilopascals and sized so that the operating pressure cannot exceed 103 kilopascals,
  - (ii) is not a blow-off vessel for a boiler that forms part of a power plant, and
  - (iii) does not have a differential pressure on the pressure boundary exceeding 103 kilopascals;
- (e) a pressure vessel that
  - (i) is installed in a closed hot water heating system,
  - (ii) has a working pressure not exceeding 207 kilopascals, and
  - (iii) has an internal diameter not exceeding 610 millimetres;
- (f) a pressure vessel that
  - (i) is used as a hot water tank, and
  - (ii) has an internal diameter not exceeding 610 millimetres;
- (g) a pressure vessel that
  - (i) is used as a water heater, and
  - (ii) has an internal diameter not exceeding 610 millimetres;
- (h) a hydropneumatic tank that
  - (i) has an internal diameter not exceeding 610 millimetres, and
  - (ii) has a volume not exceeding 450 litres;
- (i) a pressure piping system that forms part of a heating plant;

- (j) a pressure container that is an integral part of a rotating or reciprocating mechanical device, where the primary design considerations or stresses of the device are derived from the functional requirements of the device;
- (k) a pressure plant that has one or more pressure vessels and the total volume of all the vessels does not exceed 42.5 litres;
- (l) a single pressure vessel that is not connected to a pressure plant and that
  - (i) has a volume not exceeding 42.5 litres, or
  - (ii) has an internal diameter not exceeding 152 millimetres;
- (m) the following equipment used for clothing care whether or not it is located at a drycleaning facility:
  - (i) a steam chest not exceeding a volume of 42.5 litres and operating at a steam pressure not exceeding 1035 kilopascals;
  - (ii) a press not exceeding a volume of 42.5 litres and operating at a steam pressure not exceeding 1035 kilopascals;
  - (iii) a spray tank not exceeding a volume of 42.5 litres;
- (n) pressure equipment, other than boilers, with a volume not exceeding 42.5 litres that
  - (i) is the subject of a research experiment in a research facility, or
  - (ii) is part of a temporary apparatus being used in a research experiment in a research facility;
- (o) non-circulating thermal liquid heating systems.

**Repeal**

**3** The *Boilers and Pressure Vessels Exemption Order* (AR 300/94) is repealed.

**Expiry**

**4** For the purpose of ensuring that this Order is reviewed for ongoing relevancy and necessity, with the option that it may be

repassed in its present or an amended form following a review, this Order expires on August 1, 2014.

**Coming into force**

**5** This Order comes into force on April 1, 2006.
